

TRACK CONSTRUCTION

Outstanding performance emerges from  
tradition and innovation.

LEONHARD WEISS  
CONSTRUCTION COMPANY

Well-established teams have always been and are still our strength, yesterday as well as today. The experience gained in more than 100 years of successful activities all round "rail" makes us the right partner for you.

Leonhard Weiss founded the company in 1900 as a track renewal and maintenance contractor. A wealth of ideas combined with the spirit of a true pioneer – today still one of the trademarks of LEONHARD WEISS – helped to create one of Germany's oldest track renewal and maintenance contractors.

Railway traffic experienced a rapid development during the past 100 years. Developments, which we have partially contributed to and which have always put us an inch ahead of the ever increasing demands of the trade.

If we speak about track laying of the future, then innovative solutions, powerful machinery and comprehensive competence play a central role. We are capable of solving all technical, logistical and organisational challenges of maintenance and track renewal, while at the same time ensuring minimum possession times on the railway tracks. Rely on a competent partner characterised by its enthusiastic team and newest technology. We will face any problem that you may have and project orientated solutions for your applications – from the layout to the design and planning on to the the responsibility for your infrastructure.

Track construction tradition

Creating connections  
is main task.

Today modern plant is used instead of raw muscle power.

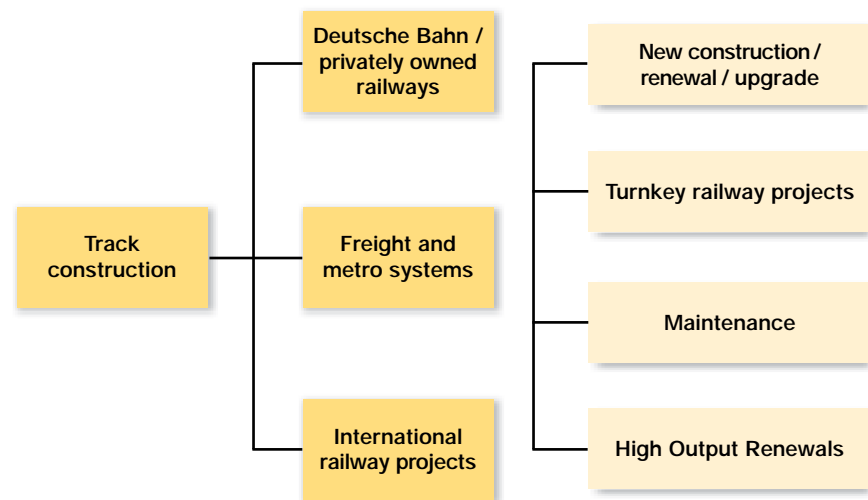

Professional track construction

Our range of services  
is something to be proud of.

We as permanent way engineers see ourselves as a competent supplier offering all of the trade headings involved: track renewal and maintenance, road construction, civil and underground engineering, canal and line construction, civil engineering, etc..

Thanks to this tremendous variety of activities we are in a position to put together and realise any performance package that our customers require – on the highest of quality levels and at the best economic conditions.

We are not afraid of taking over the responsibility as a primary contractor for all railway projects. LEONHARD WEISS is the synonym for a successful project: all-in-one performance from minor tasks to highly complex projects. And for us it is natural to also take over the responsibility for the facility even after the project has been terminated in order to guarantee the optimal availability of your railway infrastructure.

Replacement of all commercially used types of rails and sleepers in a chain production with the help of our High Output Track Renewal Trains. Our teams are "on the track" for you 24 hours per day – 365 days every year. In the wind and in the rain.

LEONHARD WEISS is your competent project planner and controller. Our specialty are hard-to-handle and complex large-scale projects for track upgrades and track renewals done through integrated services. Our specialist competence and high performance when it comes to high speed railway lines – also in the sector of slab tracks – is your benefit. We are the right partner for you all over Europe, for all track gauges – be it a mountain railway, a funicular or a narrow gauge railway.

*The innovation – High Output Track Renewal Train: accurate and fast – up to 350 m of track renewal per hour.*

We are capable of handling any type of challenge with the highest of precision and minimum restriction of the railway traffic. This is based on the account of our innovative and latest machine technology and our well-established teams. Special High Output Cranes and three High Output Track Renewal Trains are the highlight of our machine fleet. In our track renewal trains the sleepers and rails are replaced in an automated chain production process. The manifold possibilities which this system offers, allow for the handling of any type of sleeper: from a concrete one on to sleepers made of wood, steel and Y-steel and further on to wide sleepers. The rail position is documented using the most advanced technology. Tight radii are no problem either for our track renewal trains. With a plannable hourly performance of up to 350 m/h the possession time is minimised considerably.

Services for Deutsche Bahn and privately owned railways

## Sophisticated competence for wholistic functions.

*Our high-performance tamping machines are "on the track" throughout Germany for the maintenance of plain line, switches & crossings.*

Integrated services

Track renewal process and traffic planning, complete construction work as well as all activities pertaining to it, such as operation, safety and logistics all within integrated services.

Maintenance

Survey and maintenance of plain lines, switches & crossings, preparation of track work, mechanised tamping, level crossing work and related operations, welding operations, weed control, winter service.

Platform construction

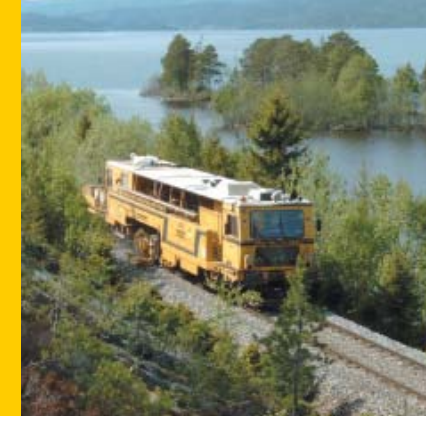

Conventional platform building, modular design (prefabricated component system) including accesses, gates, platform equipment, lighting, etc.

Railway traffic facilities

Renewal and new construction of tracks and switches as well as railway-related civil and underground engineering.

*With our rail plant we set benchmarks in reliability, performance and quality.*

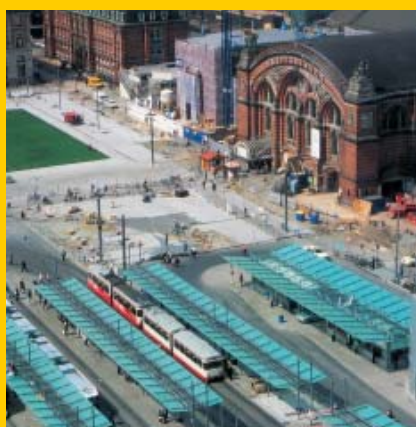

*Container handling facilities and docks are essential elements of an operational economy. We have the right solution in stock for you.*

Services for freight and metro systems / International railway projects  
**Connecting you and ensuring your mobility is our focus.**

We possess the necessary core competence for track maintenance and renewal that is indispensable in order to be able to also handle large-scale projects in the field of freight and metro systems. A competent coordination of the individual trade headings results in cost and time savings for the customer – one of our essential strengths. Considerable know-how in the draft, approval and realisation planning together with the right project management will result in the realisation of any measure required – economically, on schedule and with a high quality. We offer complete solutions from A – Z.

Our certified safety management system (Safety Certificat for Contractors\*\*) is the pre-requisite for our activities in the plants of the chemical and petrochemical industry.

Our specialists are deployed abroad more and more frequently. The advanced technology of our machines and a wealth of experience make us the service provider for all tracks and systems. In addition, LEONHARD WEISS also offers competent specialist consulting and an analysis of the status quo of your railway systems (e.g. planning and layout).

*Mobility is indispensable today. We create the urban and regional connections needed.*

*Well-established and experienced teams guarantee quality and dependability. Our secret: We use our own employees. Personal contacts with our customers and detailed project plans ensure outstanding results.*

LEONHARD WEISS service

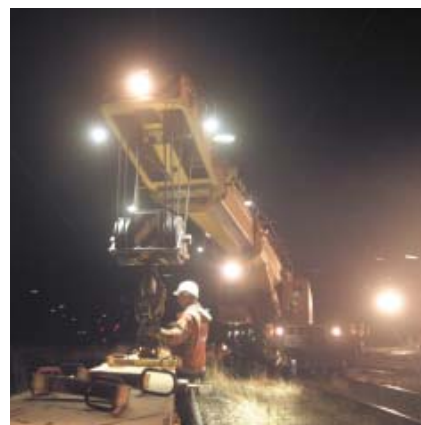

## Committed and motivated employees guarantee the best quality.

The requirements on the quality of railway tracks are ever increasing. The possession times needed for repair work will have to be kept as short as possible. An optimal availability of the railway network makes "building beneath a rolling wheel" indispensable.

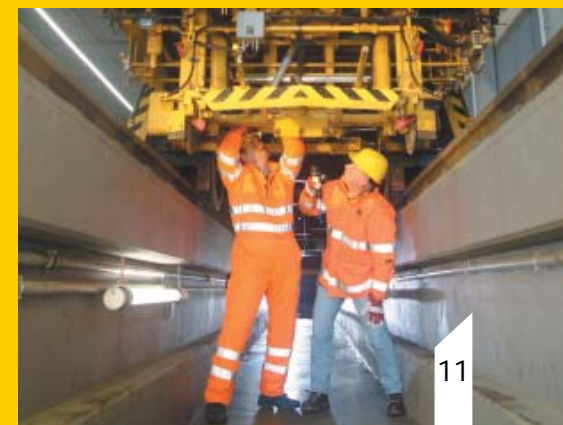

Short possession times can only be realised with a motivated team. Our ambitious teams are often able to master the challenges that they are confronted with in a time frame that is distinctly shorter than that initially planned. You as our customer will benefit from a cooperation on a partnership basis and will be able to experience "sheer building pleasure".

LEONHARD WEISS offers the right solution for any requirement: either for individual trade headings or for services of a primary contractor.

Why don't you get in touch with us?

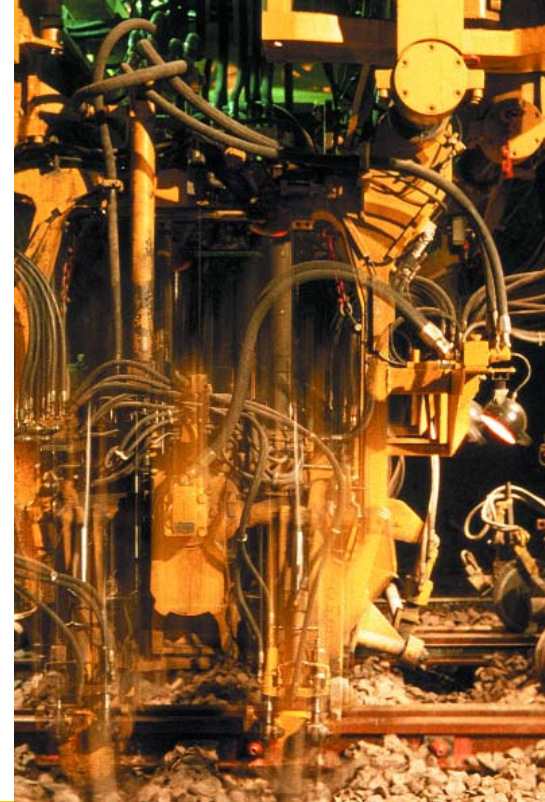

*Our equipment and machines are subject to ongoing maintenance in our company-owned workshops. Our well-trained staff is familiar with the specific requirements of any machine. Innovative proposals ensure a continuous improvement process and are implemented together with the manufacturers of the machines.*
